Dear Hiring Manager,

I'm excited to apply for your fully remote software engineering opportunity. I'm a Senior Full-Stack Software Engineer with 10+ years of experience building scalable SaaS products, high-performance backend systems, and modern web applications using PHP, Laravel, Symfony, Vue.js, and React.js. My background is centered on delivering reliable, user-focused platforms that handle complex workflows, real-time communication, and large-scale data with strong performance and clean architecture.

In my recent roles, I've designed and built cloud-native systems, microservices, APIs, real-time event pipelines, and operational dashboards used in logistics, productivity, collaboration, and enterprise software environments. I've worked extensively with PostgreSQL, MySQL, Redis, Elasticsearch, Kafka, RabbitMQ, AWS, Docker, Kubernetes, and CI/CD pipelines, which has helped me ship systems that are both scalable and production-ready.

What I bring is a strong mix of backend depth, frontend product sense, and practical system design. I'm comfortable owning features end to end, from architecture and implementation to performance optimization, integrations, deployment, and long-term maintainability. I also work well in remote environments, communicate clearly, and enjoy collaborating with cross-functional teams to turn business needs into solid technical solutions.

I'm especially interested in remote roles where I can contribute to meaningful products, solve real engineering challenges, and keep growing with a strong team. I'd welcome the opportunity to bring my experience in full-stack development, scalable architecture, and modern product delivery to your company.

Thank you for your time and consideration. I look forward to the opportunity to speak with you.

Sincerely,
Kerli Paltsmar
