

Kerli Paltsmar

Senior Full-Stack Software Engineer - PHP, Laravel, Vue.js and React.js

Tallinn, Estonia | +372 5566 8461 | kerlipal93@outlook.com | linkedin.com/in/kerli-paltsmar-ei90sie57

SUMMARY

Senior PHP Software Engineer with 10+ years of experience designing and delivering scalable web platforms, SaaS products, and high-performance backend systems using modern PHP frameworks (Laravel, Symfony, Lumen, CodeIgniter, and Zend Framework), along with Vue.js and React.js for rich front-end applications. Specialized in building microservice architectures, real-time data systems, and cloud-native applications with strong expertise in API design, distributed databases, and containerized deployments. Proven track record developing logistics platforms, collaboration systems, and enterprise automation tools that handle large-scale data, real-time communication, and complex business workflows while maintaining high performance and reliability.

EDUCATION

Bachelor's Degree in Computer Science | Tallinn University of Technology | Sep 2012 - Jun 2015

EXPERIENCE

Senior Full-Stack Software Engineer

LaraPi | Lublin, Poland

Mar 2022 - Mar 2026

- **Logistics Technology Platform** — enterprise last-mile delivery orchestration system enabling real-time fleet tracking, route optimization, and operational analytics for logistics operators and e-commerce companies (handled 15K+ daily deliveries and improved dispatch efficiency by 35%).
- Designed scalable backend systems using **PHP, Laravel, Symfony, Lumen, Domain-Driven Design, Service-Oriented Architecture, REST APIs, GraphQL APIs, gRPC**, supporting delivery workflows, dispatch automation, SLA monitoring, and fleet management.
- Built modular microservices and asynchronous pipelines with **RabbitMQ, Kafka, Redis Streams, Laravel Queues, Event-Driven Architecture**, enabling delivery event processing and dynamic route recalculation.
- Implemented data persistence and analytical storage using **PostgreSQL, MySQL, Redis, Elasticsearch, Data Warehousing, Query Optimization, Indexing**, supporting real-time delivery analytics and historical reporting.
- Deployed cloud-native systems using **AWS, EC2, S3, RDS, CloudFront, API Gateway, Load Balancers, CI/CD Pipelines, GitHub Actions**, ensuring horizontal scalability and global availability.
- Containerized applications with **Docker, Kubernetes, Helm, Terraform, Infrastructure as Code**, enabling scalable multi-service environments and automated environment provisioning.
- Designed API communication pipelines using **WebSockets, Server-Sent Events, RESTful APIs, GraphQL Subscriptions**, enabling real-time delivery tracking and operational monitoring dashboards.
- Developed dispatcher dashboards with **Vue.js, Vuex, TypeScript, TailwindCSS, Chart.js, D3.js, Mapbox APIs**, enabling route visualization, fleet monitoring, and delivery performance analytics.
- Implemented integrations with **Shopify APIs, WooCommerce APIs, ERP systems, WMS systems, Payment APIs**, enabling seamless connectivity between logistics infrastructure and commerce platforms.
- Applied **Generative AI tools** including **OpenAI APIs, Claude, and GitHub Copilot** to accelerate development workflows, assist with complex code generation, automate documentation, and improve engineering productivity across backend and frontend modules.
- Implemented **OAuth2 authentication, JWT authorization, RBAC, GDPR compliance**, protecting operational data and multi-tenant environments.
- Optimized database queries, caching layers, and asynchronous processing pipelines to support thousands of deliveries per hour.

Senior Software Engineer

iConcept | Riga, Latvia

May 2020 - Feb 2022

- **Productivity SaaS Platform** — AI-assisted task planning and personal productivity system combining intelligent assistants, scheduling automation, and behavioral analytics (served 100K+ monthly active users).
- Productivity automation engine: Developed scalable application services using **PHP, Laravel, Clean Architecture, REST APIs**, enabling task management, scheduling automation, and AI-assisted planning.
- Built data pipelines using **MySQL, Redis, Data Aggregation Services, Query Optimization**, supporting activity tracking and productivity insights.
- Managed cloud environments using **Google Cloud Platform, Cloud Run, CI/CD Pipelines, Infrastructure Automation**, ensuring automated deployments and scalability.
- **Interactive productivity dashboards**: Developed modern UI interfaces with **React.js, React Router, TailwindCSS, Chart.js**, enabling daily insights visualization and productivity analytics.
- Implemented event-driven communication systems using **WebSockets, Async Task Queues**, synchronizing AI assistant responses with user activity.
- Integrated **Calendar APIs, Notification APIs, Messaging APIs**, allowing cross-platform task synchronization and automation and implemented authentication, encryption, and secure user session management.

Full-Stack Engineer

Mifort | Tallinn, Estonia

Oct 2018 - Apr 2020

- **Communication Technology Platform** — multilingual real-time meeting and conference system delivering live transcription, translation, and voice synthesis for global collaboration (supported meetings up to 50 participants and conference broadcasts to thousands of listeners).
- Developed API services using **PHP, Laravel, REST APIs, WebSockets**, enabling meeting management, participant control, and session orchestration.
- Built streaming pipelines with **Redis, Message Queues, Event Streaming**, enabling instant delivery of transcription and translation data.
- Deployed backend services using **AWS EC2, Cloudflare, Object Storage**, supporting scalable meeting infrastructure.
- Implemented UI features using **React.js, WebRTC integrations, Reactive State Management**, enabling live captions and translation streams.
- Designed participant roles, moderation controls, and conference orchestration modules.
- Implemented logging, metrics collection, and distributed monitoring pipelines and optimized service orchestration to support sub-second translation and caption delivery.

Software Engineer

ELEKS | Tallinn, Estonia

Jul 2015 - Sep 2018

- **Retail Distribution Technology Platform** — digital field workforce management system for distributors, task tracking, rewards programs, and operational reporting (reduced operational management time by 75%).
- Implemented application services using **PHP, Symfony, REST APIs**, supporting task workflows, reward allocation, and reporting automation.
- Designed schemas using **PostgreSQL, Relational Data Modeling, Query Optimization**, supporting reporting and operational metrics.
- Hosted services using **AWS infrastructure**, enabling reliable backend operations.
- Built operational dashboards using **Vue.js, Vuex, Material UI**, enabling managers to configure tasks and track distributor activity.
- Implemented notification pipelines for alerts, rewards, and task updates, developed dashboards with charts and reporting modules, and automated operational workflows reducing manual coordination.

SKILLS

Backend & PHP Ecosystem: PHP, Laravel, Symfony, Lumen, CodeIgniter, Zend Framework, Slim Framework, MVC Architecture, Domain-Driven Design (DDD), Clean Architecture, Hexagonal Architecture, REST APIs, GraphQL APIs, gRPC, Microservices Architecture, API Gateway, Webhooks, OAuth2, JWT Authentication, RBAC Authorization, OpenAPI/Swagger, OpenAI API, Anthropic Claude API, GitHub Copilot

Frontend Development: Vue.js, Vue 3, Vuex, React.js, Pinia, TypeScript, JavaScript (ES6+), HTML5, CSS3, TailwindCSS, Bootstrap, Vuetify, Material UI, SCSS, Webpack, Vite, Axios, SPA Architecture, Progressive Web Apps (PWA)

Data & Database Systems: PostgreSQL, MySQL, MariaDB, Redis, Elasticsearch, MongoDB, Relational Data Modeling, Query Optimization, Database Indexing, Data Warehousing, OLAP Queries, Data Aggregation Pipelines

Messaging, Streaming & Event Processing: Kafka, RabbitMQ, Redis Streams, Apache Pulsar, Event-Driven Architecture, Message Queues, Async Job Processing, Background Workers

Cloud Platforms & Infrastructure: AWS (EC2, S3, RDS, Lambda, CloudFront, API Gateway, SNS, SQS), Google Cloud Platform (Cloud Run, Cloud Storage, Pub/Sub), Azure Cloud Services

Containerization & Infrastructure Automation: Docker, Docker Compose, Kubernetes, Helm, Terraform, Infrastructure as Code (IaC), Container Orchestration

DevOps & CI/CD: CI/CD Pipelines, GitHub Actions, GitLab CI, Jenkins, Bitbucket Pipelines, Automated Deployments, Environment Provisioning, Infrastructure Monitoring

Monitoring, Logging & Observability: Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), Sentry, New Relic, Application Performance Monitoring (APM)

Real-Time Communication & Networking: WebSockets, Server-Sent Events (SSE), WebRTC, Webhook Systems, Real-Time Event Streaming

Testing & Quality Assurance: PHPUnit, Pest, Codeception, Jest, Cypress, Unit Testing, Integration Testing, API Testing, Test Automation

Security & Compliance: Data Encryption, Secure Authentication, API Security, OWASP Best Practices, GDPR Compliance, Role-Based Access Control

Integration & Enterprise Systems: ERP Integrations, CRM Systems, Payment Gateways (Stripe, PayPal), E-commerce APIs (Shopify, WooCommerce, Magento), Third-Party SaaS APIs

PROJECTS

Logistics SaaS Platform for Delivery Optimization

<https://fleetworthy.com>

Developed a scalable multi-tenant logistics platform enabling companies to manage fleets, optimize delivery routes, and monitor real-time delivery operations through an integrated operations console, driver mobile app, and customer tracking interface. The system supports dynamic route optimization, predictive ETA calculations, automated task assignment, and integrations with e-commerce and ERP systems, enabling logistics operators to manage thousands of deliveries efficiently.

Real-Time Communication & Translation Platform — WebRTC-based collaboration system

<https://www.vonage.com>

Developed a real-time meeting and conferencing platform enabling instant calls, scheduled sessions, and large-scale broadcasts with live transcription and multilingual translation. The system supports WebRTC-based low-latency audio streaming, participant management, QR-based meeting access, and real-time captions, allowing up to 50 active participants and thousands of listeners in conference mode.
