COVER LETTER:

Hi Hiring Team,

I am excited to apply for a Senior Full-Stack .NET Engineer position. With over 8 years of experience designing and delivering scalable enterprise solutions across logistics, finance, SaaS, and customer operations, I bring a strong record of transforming complex systems into high-performance, cloud-native platforms. My expertise spans **C#, ASP.NET Core, .NET, Blazor, React, Angular, REST APIs, microservices, SQL Server, and Azure**, with a proven ability to lead projects through the full **Software Development Lifecycle (SDLC)** from architecture design to deployment and maintenance.

Throughout my career, I have modernized legacy systems into cross-platform solutions, delivering web, mobile, and desktop applications with unified codebases exceeding 90% reuse. I have developed AI-powered platforms leveraging **Azure OpenAI, LangChain, and computer vision technologies**, enabling intelligent automation, real-time decision-making, and semantic data retrieval. I have also built robust, cloud-native microservices and event-driven architectures using **Docker, Kubernetes, Azure Container Apps, and distributed messaging patterns**, improving scalability, transaction reliability, and operational efficiency.

My work emphasizes security, observability, and performance optimization. I have implemented enterprise-grade authentication and authorization (**OAuth 2.0, JWT, RBAC/ReBAC**), monitoring and analytics tools (**Azure Application Insights, Grafana**), and real-time dashboards, ensuring resilient and maintainable systems. I thrive in collaborative, Agile environments, partnering with cross-functional teams to deliver high-quality solutions that meet complex business and technical requirements.

I am eager to bring my full-stack engineering expertise, cloud architecture knowledge, and experience with AI-driven automation to contribute to innovative software solutions. I would welcome the opportunity to discuss how my skills and experience can support your engineering initiatives.

Thank you for your time and consideration.

Sincerely,

Aliaksei Krents
