

Aliaksei Krents

Sr. Full-Stack Software Engineer | Python, Django, FastAPI, React, AWS, AI/ML

Cover Letter

Hi Hiring Team,

I am excited to apply for the Senior Software Engineer role, bringing over 8 years of experience building scalable, AI-powered platforms across real-time communication, healthcare, and analytics domains. My background centers on Python-based architectures using Django and FastAPI, combined with cloud-native systems on AWS and Kubernetes, enabling me to deliver high-performance, production-ready solutions end-to-end.

At SoftKraft, I architected a real-time multilingual meeting platform integrating WebRTC, AI speech pipelines, and GenAI technologies such as OpenAI GPT-4o, RAG, and vector search—supporting thousands of users with sub-second latency while reducing manual documentation by 70%. Previously, I led backend development for AI-driven conferencing systems and healthcare solutions, where I built secure, distributed microservices, real-time data pipelines, and voice-based AI assistants that improved both operational efficiency and user experience.

I bring strong expertise in designing distributed systems (gRPC, GraphQL, REST), optimizing large-scale data platforms (PostgreSQL, Redis, Elasticsearch), and deploying resilient infrastructure using Docker, Kubernetes, and CI/CD pipelines. Beyond backend engineering, I also deliver polished, accessible user experiences and collaborate effectively in Agile environments with a strong focus on code quality, testing, and continuous improvement.

I'm particularly drawn to opportunities where I can leverage AI, real-time systems, and scalable cloud architecture to build impactful products. I would welcome the chance to contribute my experience and help drive innovation within your team.

Thank you for your consideration.

Best regards,

Aliaksei Krents
