February 12, 2026

Dear Hiring Manager,

I am writing to express my interest in the Senior AI/ML Software Engineer position. With over nine years of hands-on experience designing and delivering production-grade AI systems, I bring a strong track record of building end-to-end, cloud-native machine learning platforms that translate complex data into measurable business impact.

In my current role at Blue Label Labs, I architected and delivered an AI-driven geospatial due diligence platform that combined large-scale data engineering, applied NLP, and real-time inference to automate regulatory and land-use analysis. By integrating Python-based ML pipelines, geospatial analytics, and generative AI workflows into a scalable AWS deployment, the platform reduced analysis time from days to minutes and generated significant cost savings per project. I worked closely with product, engineering, and business stakeholders to ensure the system delivered actionable insights rather than purely technical outputs.

Previously at Plego, I led the development of an AI-powered media intelligence platform that processed and analyzed thousands of online news articles using NLP, semantic similarity models, and automated classification pipelines. This work eliminated manual review processes, improved data quality, and enabled B2B clients to uncover trends and insights at scale. Earlier in my career at Electric Power Engineers, I built and productionized ETL and machine learning pipelines for predictive modeling, real-time inference, and experimentation, directly supporting ROI-driven decision-making.

Across roles, my strengths include architecting reliable ML systems, operationalizing models in production, and bridging the gap between data science and software engineering. I have deep experience with Python-based ML stacks, NLP and generative AI, data-intensive backend systems, and cloud deployments, and I approach AI development with a strong focus on scalability, reliability, and business value.

I would welcome the opportunity to contribute my experience building production AI systems to your team and help deliver intelligent, data-driven products at scale. Thank you for your time and consideration - I look forward to the possibility of discussing how my background aligns with your needs.

Thank you for your time.

Sincerely,

Brian Powell
