Dear Hiring Team,

I am excited to apply for the JavaScript Full Stack & Mobile Software Engineer position. With over 10 years of experience building scalable web and mobile platforms using React, Next.js, React Native, Node.js, and TypeScript, I have led end-to-end architecture, API design, cloud deployments, and cross-platform mobile delivery across healthcare and InsurTech domains. I specialize in designing secure REST and GraphQL APIs, performance-optimized frontends, subscription systems, and CI/CD pipelines that support high-traffic, multi-region applications in AWS, Azure, and GCP environments.

In my recent roles, I have driven technical discovery, defined system architecture, and delivered production-grade solutions from concept to deployment. I have built composable platforms with Next.js and Node.js, implemented PostgreSQL and Oracle relational schemas, developed React Native mobile apps with synchronized backend services, and integrated secure payment flows using Stripe and webhook-based validation.

My approach combines clean architecture, performance optimization, and strong collaboration within Agile teams to ensure reliable and maintainable systems.

I am specifically looking for a fully remote role where I can contribute at a senior level, take ownership of architecture decisions, and help scale products with measurable business impact. I thrive in distributed teams, communicate proactively, and consistently deliver high-quality solutions that align engineering excellence with product goals.

I would welcome the opportunity to bring my full stack and mobile expertise to your team and contribute to building impactful, scalable software. Thank you for your time and consideration, and I look forward to the opportunity to speak further.

Sincerely,
Ryan Sullivan
