Dear Hiring Manager,

I'm writing to express my interest in the Senior Full Stack Engineer position. With over 10 years of experience building, scaling, and operating production-grade web applications, I bring a strong combination of hands-on engineering depth, system-level thinking, and product-driven execution.

Throughout my career, I've designed and delivered end-to-end platforms using JavaScript, TypeScript, and Python across modern frontend and backend stacks, including React, Next.js, Node.js, Django, and FastAPI. I've led the development of secure, scalable APIs (REST, GraphQL, gRPC), architected microservice-based systems, and built data-intensive applications that prioritize performance, reliability, and maintainability.

Most recently at Electric Power Engineers, I led development of a cloud-hosted, full-stack platform supporting geospatial analytics and real-time energy data. My work spanned backend service design, frontend architecture, API security, and cloud-native deployment across AWS, Azure, and Kubernetes environments. I've consistently focused on improving system performance, enforcing strong security models (OAuth2, JWT, RBAC/ReBAC), and delivering clean, well-documented solutions in close collaboration with product, QA, and data teams.

Previously, I've built high-traffic consumer and enterprise systems, including dynamic booking platforms, analytics dashboards, and performance optimization tools. These roles strengthened my ability to balance technical rigor with real business impact—whether optimizing Core Web Vitals, scaling payment workflows, or designing event-driven architectures for reliability under load.

I'm motivated by opportunities where engineering quality, thoughtful system design, and real-world impact intersect. I enjoy working in fast-moving, collaborative environments and contributing not just code, but architectural judgment and mentorship as teams scale.

I'd welcome the opportunity to discuss how my experience can contribute to your team's goals. Thank you for your time and consideration.

Best regards,

Mason Brooks
